

```
expect.extend({
  fullName(actual, fullName) {
    const { first, last } = actual;
    const actualName = `${first} ${last}`;

    const [expectedFirst, expectedLast] = fullName.split(" ");
    const expectedName = `${expectedFirst} ${expectedLast}`;

    const pass = actualName === expectedName;

    const message = pass
      ? () => `Name should not be ${actualName}`

  }
});
```

```
expect.extend({
  fullName(actual, fullName) {
    const { first, last } = actual;
    const actualName = `${first} ${last}`;

    const [expectedFirst, expectedLast] = fullName.split(" ");
    const expectedName = `${expectedFirst} ${expectedLast}`;

    const pass = actualName === expectedName;

    const message = pass
      ? () => `Name should not be ${actualName}`
      : () => `Name should be ${expectedName}, but is ${actualName}`;

  }
});
```
