```javascript
expect.extend({
    toBeParent(actual) {
        const role = actual.data.user.role;
        const pass = role === "parent";

        const message = pass
            ? () => `Should not be a parent` // message for .not
            : () => `Should be a parent, not a ${role}`;

    }
});
```

```javascript
expect.extend({
    toBeParent(actual) {
        const role = actual.data.user.role;
        const pass = role === "parent";

        const message = pass
            ? () => `Should not be a parent` // message for .not
            : () => `Should be a parent, not a ${role}`;

    }
});
```

```javascript
expect(response).toBeParent();

// Should be a parent, not a butler
```
